

WATCH DISPLAY

- A - 24 HOUR DISPLAY
- B - DATE INDICATOR
- C - CROWN
- D - POWER DISPLAY

TIMESSETTING

This watch features three distinct watch face displays: power reserve gauge, 24-hour military dial and a date calendar window. The distinguished feature is the power reserve gauge, which displays how many hours of power are left to keep your watch continually running and sufficiently powered to ensure correct timekeeping.

1. Locate the crown on your Stauer watch (above diagram part C). Due to the crown being machine tightened, you will need to unlock the crown to make setting adjustments. To unlock the crown, turn the crown counterclockwise (toward you) 5 or 6 times until you feel the crown “pop out” on the spring. Your crown is now

unlocked and in the “0” (zero) position. Please note the three crown positions (0-1-2) in part C of above diagram.

2. Before the watch is worn for the first time, wind the crown, by hand, ten (10) cycles by rolling the crown clockwise (away from you) while in the “0” (zero) position.
3. To set the time: Pull the crown out to position “2” (part C) which will allow you to set watch hands for proper time selection. Once time is set, push crown back into original “0” (zero) position and tighten crown by turning clockwise.
4. To set the calendar date window (part B): Pull the crown out to the “1” position and rotate the crown counterclockwise (toward you) for proper date selection. “0” (zero) position and tighten crown by turning clockwise.

5. The power reserve gauge (part D) indicates the energy reserves available to keep the watch properly powered. The pointer will move to illustrate the hours of power available to keep the watch sufficiently running. This feature is an added display feature only and does not require a setting to be performed.
6. The 24-hour military dial (part A) displays every hour of the day and is an added display feature only and does not require a setting to be performed.

† Please use the complimentary watch stylus enclosed (or ball point pen) to set month and day functions.

ADJUSTING CLASPS

1. To shorten or lengthen a hook on our watch bracelet, lay the watch down on a soft surface, insert a flat tool (tweezers) in the groove on the tab and lift up. After setting the desired size press the tab locks securely into position.
2. To adjust a fold-over buckle bracelet, carefully remove only the pushpin from the bracelet side (not the buckle side), using a sharp pointed tool. Reposition the pin as required.

IMPORTANT

- Please remember to wear your Stauer watch each day to ensure its lifelong accuracy and dependability for your timekeeping needs. By continually wearing your Stauer watch, you will be taking full advantage of its state of the art automatic winding feature which allows the watch to function utilizing your simple body movement. It can, however, be reactivated simply by instilling motion by being worn. When not wearing the watch, resting the watch on its side (with crown facing towards the ceiling) will help to keep more accurate time.

A Watch Winder is a great investment to ensure all of your Stauer wristwatches are keeping correct time and ready for you at any time! Take advantage of our Watch Winder offers on our website. Visit us at, www.stauer.com to learn more about the fantastic benefits of owning a Watch Winder!
