

Stauer 1930's Dashtronic Watch

WARNING: Rare Automatic Watch

The 1930s brought unprecedented innovation in machine-age technology and materials. Industrial designers from the auto industry translated the principals of aerodynamics and streamlining into everyday objects like radios and toasters. It was also a decade when an unequaled variety of watch cases and movements came into being.

In lieu of hands to tell time, one such complication, called a jumping mechanism, utilized numerals on a disc viewed through a window. With its striking resemblance to the dashboard gauges and radio dials of the decade, the jump hour watch was indeed "in tune" with the times!

DISPLAY

Your watch displays the time as Hours, on the bottom dial in **black** and Minutes, on the top dial in **red**.

INITIAL OPERATION

1. Locate the crown on your Stauer watch (diagram). There are two crown positions (0-1).
2. Before the watch is worn for the first time, wind the crown 15 to 20 cycles by turning in a clockwise motion (away from you) while in the "0" (zero) position.

TIMESSETTING

1. Pull the crown out to position "1." Turn the crown clockwise to set the hour (bottom black dial).
2. Once the hour is set, rotate the crown counter-clockwise (toward you) to set the minutes (top red dial).
3. Once time is set, push the crown back to "0"

IMPORTANT

Wear your Stauer watch every day to ensure lifelong accuracy and dependability.

Wearing your Stauer watch daily takes full advantage of its state of the art automatic winding feature which allows the watch to function on kinetic power (simple body movement). This kinetic movement means your Stauer watch will never require batteries and rarely require winding.

Keep in mind that your Stauer watch will stop running if it is not properly kept in motion by daily wear. If your watch stops, simply wind the crown 3-5 times (in the zero position). If your watch is completely stopped, you may need to wind it 15-20 times. *NOTE:* Stop winding your crown if you feel resistance.

When not wearing the watch, rest it on its side with the crown facing the ceiling to ensure more accurate time.
