

WATCH DISPLAY

A - Crown

B - AM/PM (Sun/Moon) Dial

TIMESSETTING

Before the watch is worn for the first time, wind the crown, by hand, 10 to 15 cycles by rolling the crown clockwise (away from you) while it's in the "0" (zero) position.

TO SET THE TIME

1. Pull the crown (part A) out to position "1" and rotate it to the desired time.
2. Once the correct time is set, push the crown back into "0" position.

NOTE: The AM/PM indicator (part B) synchronizes with the main dial. You can adjust it to display either AM (depicting the Sun) or PM (depicting the Moon) while setting the time. Simply continue turning the crown until you reach the desired AM or PM indication.

AUTOMATIC INSTRUCTIONS

Automatic movements contain no battery. They are powered by a coiled mainspring that is charged by either winding manually by the crown or from the rotating pendulum attached to the movement that rotates through the natural movements of your arm while wearing the watch. The watch is self-winding and will continue to charge at all times while being worn. When an automatic watch is not worn, and not manually wound by the crown, it will wind down and stop running.
